Profile Summary

Full stack engineer with 5+ years of experience building fintech and B2B data intelligence systems across backend services, RESTful APIs, distributed data ingestion, search platforms, and high-performance web applications.

Experience

Oxyzo Financial Services (OfBusiness Group)

May 2025 – Present

Senior Software Engineer

Gurgaon, HR

- **Enterprise Workflow Management System** – Led full-stack delivery of an organization-wide workflow automation platform for task ownership, priority handling, dependency tracking, and real-time execution visibility.
- Designed workflow state models, service boundaries, API contracts, and backend integration patterns to support reliable task lifecycle management across interdependent teams.
- Built scalable application foundations, reusable modules and UI components using bit.cloud.

OfBusiness

Dec 2020 – Apr 2025

Senior Software Engineer

Gurgaon, HR

- **Nexizo.ai** – Contributed to the bidder profiling and data intelligence platform used by 10K+ customers, helping scale curated tender, company, and bidder datasets to 10M+ profiles.
- Designed and optimized search and analytics workflows for high-speed querying, advanced filtering, profile tagging, and review operations across large datasets.
- Built distributed data ingestion and web scraping pipelines using AWS Lambda, SQS, and forward proxy rotation, processing 1M+ daily requests from multiple external sources.
- Led the development of Nexizo.ai from scratch, integrating Next.js with Strapi CMS(with added capabilities of nodejs plugins) to build a scalable, SEO-friendly marketing website.
- **BidAssist** – Developed a SaaS invoice management platform featuring subscription plans, configurable usage limits, role-based access control, invoice lifecycle management, and reporting.
- Increased Lighthouse performance score upto 95+ by optimizing rendering and asset delivery with SSR, code splitting, CDN caching, bundle optimization, and Node.js clustering.
- Reduced page response latency in a Node.js SSR application through parallel API requests, static API caching, and server-to-server (S2S) communication, avoiding client-side DNS resolution

Education

Government Engineering College

2016 – 2020

Bachelor of Engineering in Computer Science

Ujjain, Madhya Pradesh

Technical Skills

Languages: JavaScript, TypeScript, Java, SQL, HTML, CSS

Backend: Node.js, Express.js, REST APIs, Microservices, Worker Queues, Spring Boot

Frontend: React.js, Next.js, Redux Toolkit, Zustand, TanStack Query

Data/Infra: MongoDB, MySQL, Redis, AWS Lambda, SQS, Docker, Webpack, RsPack

Personal Projects

Module Development Kit | *pnpm workspace, Storybook, Nodejs, Verdaccio*

- Architected a modular development platform where AI agents can discover, compose, and orchestrate reusable UI components, modules, and workflows to generate production-ready applications.
- Designed a metadata-driven component registry exposing schemas, capabilities, dependencies, and configuration contracts, enabling LLMs to reason about modules instead of generating UI from scratch.
- Built the platform foundation with versioned packages, Storybook documentation, private registry integration, and standardized module APIs to support scalable AI-assisted application development.
- Defining a roadmap toward an AI-native app builder that transforms natural language prompts into full-stack applications by composing existing modules, generating business logic, connecting APIs, and producing deployable projects.

Loki (Nginx Reverse proxy) | *Networking* | GitHub

- Built an internal connectivity solution to bridge local development environments with remote stage/devbox machines using Nginx reverse proxying.
- Implemented configurable port mapping and request routing to replace manual tunnel setup, enabling seamless local-to-stage communication for development and debugging.
